PFOA-FREE COOKWARE

SCANPAN® DEBUTS WORLDS FIRST PFOA-FREE PROCESS FOR NONSTICK COOKWARE

We have introduced a PFOA-free (perfluorooctanoic acid) process for our patented ceramic-titanium nonstick surface.

Our cookware has always been PFOA-free. However, the recent concerns linked to PFOA and its environmental impact has prompted us to work closely with our suppliers to develop a PTFE compound that would not require a PFOA emulsifier.

Prior to Green Tek, PFOA supported the polymerization of PTFE however it was always extracted after the production process, so by the time the nonstick compound was applied to the pan surface, PFOA was no longer present.

We want to tell our customers without any kind of reservation that SCANPAN® cookware is completely PFOA free AT ANY STAGE of the manufacturing process.

The new nonstick compound continues to work flawlessly in conjunction with our patented ceramic-titanium technology, so the customer will see no difference in the product's superior performance.

The new surface named Green Tek is available on SCANPAN Classic, SCANPAN Professional and our latest addition to SCANPAN's patented ceramic-titanium nonstick family, SCANPAN CTX.

SCANPAN® cookware with its new "Green Tek" surface was first presented at Ambiente trade fair in Frankfurt Germany in February 2008.
