

## **SCANPAN® – 100% free from PFOA and PFOS**

All SCANPAN® products are 100% free from PFOA and PFOS, from production to final product.

The past years have shown a growing concern as to whether PFOA and PFOS have harmful effects on health and environment. The latest research has found that these chemicals may reduce women's fertility.

As a part of our on-going product development, we developed a few years ago in cooperation with our suppliers a new coating – Green Tek. This coating is from raw material to final product completely free from both PFOA and PFOS and from, in conjunction with our patented ceramic titanium technology, an exceedingly resistant non-stick surface.

Prior to Green Tek, PFOA supported the polymerization of PTFE. However, during the production process PFOA exuded, so that the final product was PFOA-free. PFOS has never formed part of the production process of SCANPAN® products.

At SCANPAN A/S, we are proud once again to lead the way when it comes to innovation and technology.
